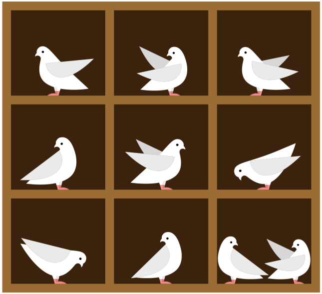
The First Crisis in Mathematics



Theorem (Pigeonhole Principle)

If n objects are placed in r boxes, where $r < n$, then at least one of the boxes contains ≥ 2 ($\geq \lceil \frac{n}{r} \rceil$) object.

Numbers

Consider the numbers $1, 2, \ldots, 2n$, and take any $n+1$ of them. There are two among these $n+1$ numbers which are relatively prime.

Numbers

Consider the numbers $1, 2, \ldots, 2n$, and take any $n + 1$ of them.
There are two among these $n + 1$ numbers which are relatively prime.

There must be two numbers which are only 1 apart.

Numbers

Consider the numbers $1, 2, \ldots, 2n$, and take any $n+1$ of them.
There are two among these $n+1$ numbers such as one divides the other.

Numbers

Consider the numbers $1, 2, \ldots, 2n$, and take any $n+1$ of them.
There are two among these $n+1$ numbers such as one divides the other.

$$a = 2^k m, \quad (1 \leq m \leq 2n-1 \text{ is odd})$$

There $n+1$ numbers have only n different odd parts.

There must be two numbers with the same odd part.

Hand-shaking

If there are $n > 1$ people who can shake hands with one another, there are two people who shake hands with the same number of people.

Hand-shaking

If there are $n > 1$ people who can shake hands with one another, there are two people who shake hands with the same number of people.

$$0 \sim n - 1$$

Hand-shaking

If there are $n > 1$ people who can shake hands with one another, there are two people who shake hands with the same number of people.

$$0 \sim n - 1$$

Either the '0' hole or the 'n − 1' hole or both must be empty.

Sums

Suppose we are given n integers $a_1, a_2, \ldots, a_n$.
Then there is a set of consecutive numbers $a_{k+1}, a_{k+2}, \ldots, a_l$ whose sum $\sum_{i=k+1}^{l} a_i$ is a multiple of n.

Theorem (Parity (奇偶性) of Permutations)

将一个置换表示成若干对换的乘积，所用对换个数的奇偶性是唯一的。

Definition (Even/Odd Permutations (偶置换/奇置换))

可表示为偶数个对换的乘积的置换称为偶置换; 否则, 称为奇置换。

Definition (Even/Odd Permutations (偶置换/奇置换))

可表示为偶数个对换的乘积的置换称为偶置换; 否则, 称为奇置换。

Definition (Alternating Group (交错群; A_n))

由 S_n 的全体偶置换构成的子群称为 n 次交错群。
